Improving Efficiencies in Scleral Lens Fitting (OPTPVUE)

Manufacturer Lecturer

There has been a fantastic merging of technologies, materials and techniques that has benefitted the patient and practitioner interested in embracing scleral lenses. Faster and more successful fits are now realized for both challenging corneal and external ocular disease cases as well as the normal cornea patient. Spectral Domain Ocular Coherence Tomography (SD-OCT) brings microns-specific imaging technology to the anterior segment, which has revolutionized scleral lens fitting. Learn more about how OCT virtually eliminates the need for fluorescein evaluations, improves fitting accuracy, enables staff to gather critical information on the lens fit and frees up doctor time for enhanced patient education.
